6. ___ It’s boring to always stick to the same brand every time. Let’s try something new.
7. ___ There are lots of tiny holes in a piece of cork, so air can penetrate it.
8. ___ If you don’t follow the correct steps, problems will arise.
Sealing with Approval

Wine can be made with red grapes or white grapes, and, especially in the case of red wines, a number of doctors have reported that a moderate amount of wine has certain health benefits. This may be one of the reasons why the number of people drinking wine has risen over the past years. As new wine-shoppers browse the shelves of their local markets, they face a tough decision. Should they buy a wine with a **cork** or a **screw top**? And shoppers are not alone in their dilemma. **Wineries** are also facing tough choices in the best way to seal their products.

The root of the problem lies in “cork taint.” Cork taint refers to a problem with wine that has been sealed with a bad cork. Traditionally, all corks are made from a special oak tree that grows around the Mediterranean. In the process of making the corks and sealing wine bottles, a certain type of **mold** may start to grow on some corks. Over time, this mold can produce a chemical that makes the wine inside the bottle taste **musty**. In fact, the human tongue is so sensitive to this particular compound that people can taste it even diluted up to six parts per **trillion**!

How big is the problem of cork taint? Some experts from the wine industry claim cork taint affects one out of every ten bottles of wine. And as one spokesperson for an American winery says, “No other packaging industry in the world would put up with that kind of failure rate.”

Some wine makers see a possible solution to the problem of cork taint through adopting the tried and true method of sealing bottles with screw tops. However, many wineries are still playing it safe and sticking to corks for two reasons. First, there is the old belief among cork users that small amounts of oxygen are able to penetrate corks. This oxygen, they say, is necessary for the proper aging of fine wines, especially those aged 10 years or more. Screw tops do not allow for any oxygen to get into the bottles after they are sealed.

Another problem arises from the image screw tops have with the public. In most people’s minds, screw tops are only found on cheap, low-quality wines. It will take a lot of effort from wineries to re-educate the public if they want to change the image of screw tops. In addition, there is the problem of losing the romantic, elegant mood produced by the ceremonial popping of the cork. Consumers don’t seem to feel the same thrill when unscrewing a top.

---

6 **cork**: a special wood used to seal bottles
6 **screw top**: a lid that must be twisted to remove or close
7 **wineries**: places that make wine
9 **taint**: a small amount of contamination; spoilage
13 **mold**: fungus
15 **musty**: stale, old, and moldy
17 **trillion**: $1 \times 10^{12}$
Reading Comprehension

Choose the best answer.

1. Which question does this reading focus on?
   a. How can you choose a good wine?  
   b. Where do the best wines come from?
   c. How should wineries seal wine?  
   d. Why are some wines very expensive?

2. What does “cork taint” affect?
   a. The age of wine  
   b. The air in wine  
   c. The color of wine  
   d. The taste of wine
