Frogs

Frogs are amphibians.
Most amphibian animals spend
part of their lives as land animals
and part of their lives as water animals.

Bodies

Frogs have four legs with webbed toes.

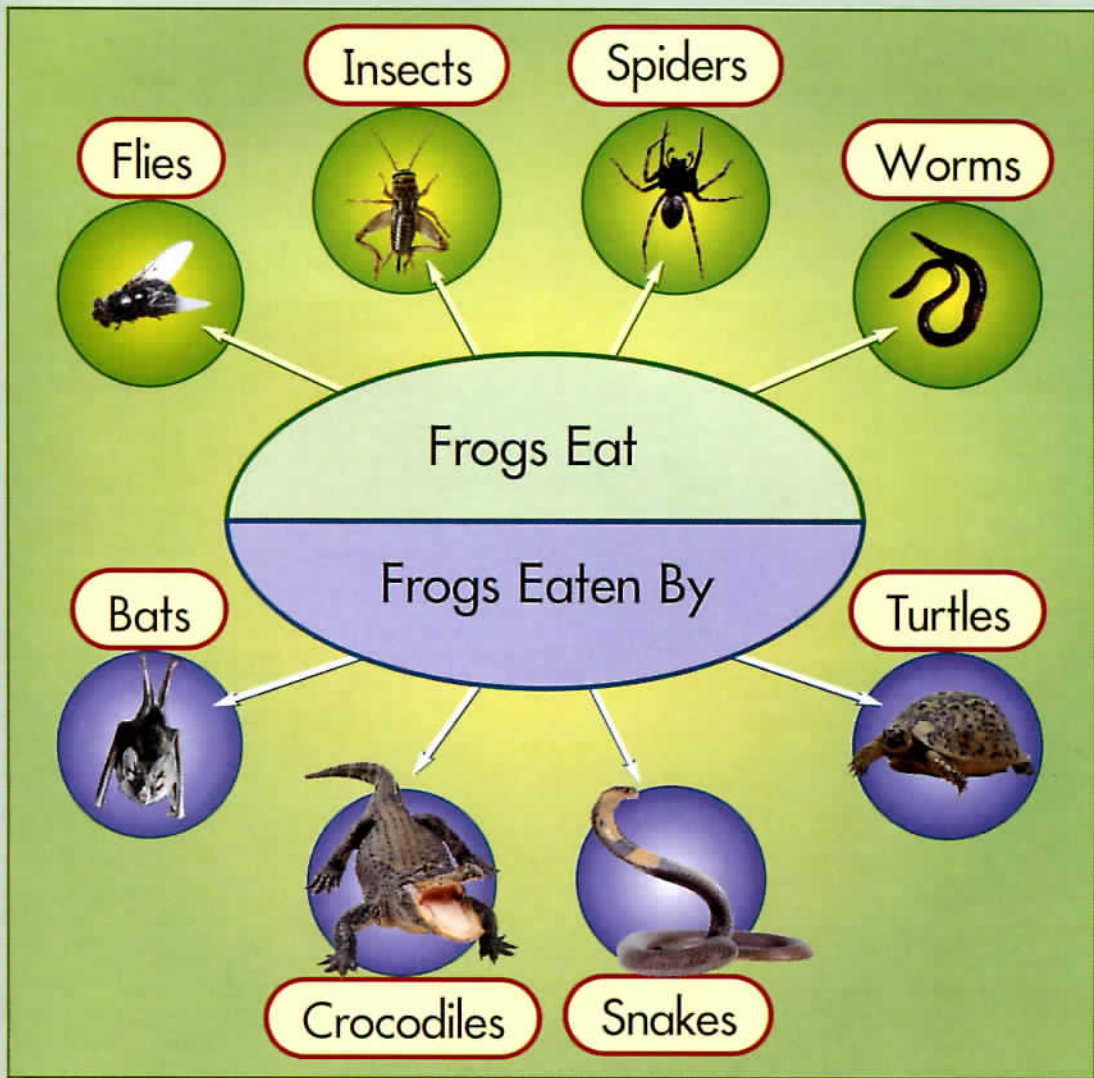

Frogs do not have tails.

Food

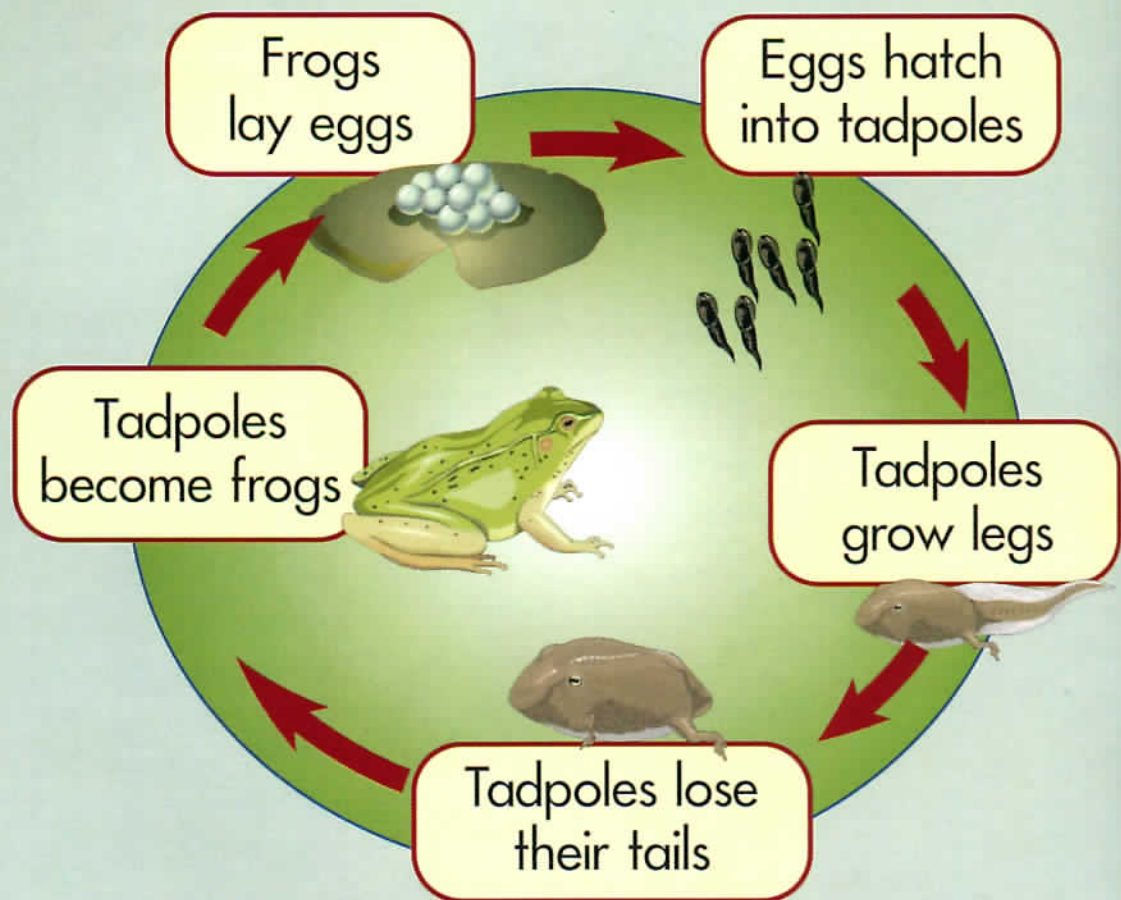

Frogs eat different kinds of food.

Different kinds of animals eat frogs.

Life Cycle

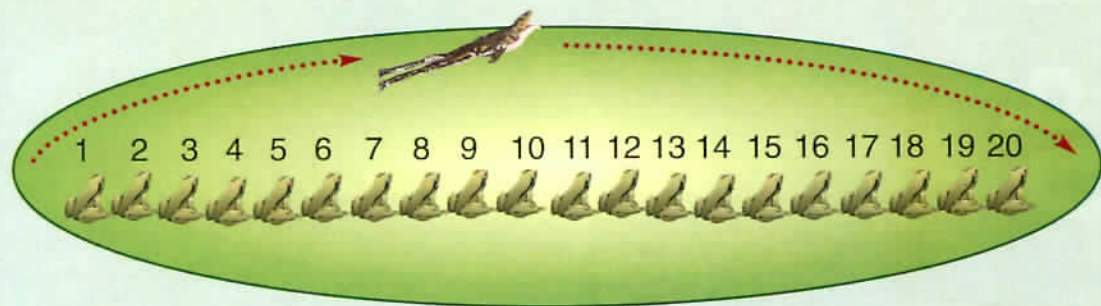

Frogs' bodies change shape as they grow. A tadpole does not look like a grown-up frog.

Facts

- Frogs have been on the earth for 180 million years.
