In an eco-city, energy, food, and water are made in natural ways. What are some of the natural ways we can make energy? We can get energy from the sun. Solar panels catch energy from the sun. We can put solar panels on the tops of buildings or in big open places where the sun shines bright. Another way to make energy in a natural way is wind turbines. These look like very tall fans. When the wind blows, the blades of the wind turbine start to turn. While they move, they are making energy. So, anytime the wind blows, energy is being created. Another way to make natural energy is with hydro-electric dams. People can build dams in rivers. As the water passes through the dam, energy is made. These ways of making energy reduce pollution because they don't create any waste. In each of these ways, energy is made using what nature gives us. Waste will be reduced by creating energy in natural ways.

1. Some houses are beautiful. They are built in special ways because of the environment.

→ Some houses are special. They are built in special ways because of the environment.

What are some kinds of special houses? Igloos are special houses.

2. They are made for very warm weather.

→ They are made for very cold weather.

They are made out of blocks of ice and snow.

They are warmer on the inside than the weather outside.

3. But it's still cold outside!

→ But it's still cold inside!

They aren't meant to be lived in for a very long time.

People who live nearby a river, may live in a house boat. They are made out of wood.

4. Usually, people in warm areas stay on a house boat.

→ Usually, people in warm areas live on a house boat.

Inside, it can be cool in the day if the house boat has fans or air conditioning.

It can also be cool if the boat is moving. It can be warm at night.

5. These houses are all special because they are meant for people who live in special areas.

→ These houses are all special because they are meant for people who live in special places.

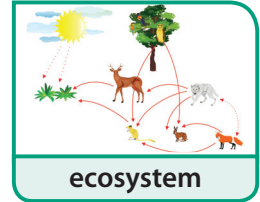

They help people who live in special places feel comfortable.

All living things need five things to survive:
air, food, water, shelter, and sunlight. Food is how living
things get energy. We can categorize living things by how they get
energy. There's a cycle of energy sharing between living
things that happens in different natural environments. These
different natural environments of energy sharing between living things
are called ecosystems. There are many different
types of ecosystems. What are some ecosystems
you can think of? A coral reef is one type of ecosystem in the
ocean. They have some of the most amazing ocean plants
and animals in them. Another type of ecosystem is a jungle.
These have some of the most amazing plants and animals
in them. Another special kind of ecosystem is a desert. Deserts
don't have as much life as a coral reef or a jungle. But the plants and
animals that live in a desert ecosystem are still really special.

All ecosystems need producers, consumers, and decomposers.

All producers are plants. All consumers are animals.

Decomposers are different. Decomposers can be animals or plants.

Termites are decomposers. They break down dead trees into

soil. What are some other kinds of decomposers, and what

do they do? Two plant decomposers are mushrooms and moss. Some animal

decomposers are earth worms and crabs. All decomposers break

down dead things and waste into soil and nutrients. This helps the

ecosystem because it helps create new soil and nutrients. Soil and

nutrients help new producers to grow. The

producers make energy. Then, a consumer eats some of the producers to get

energy. Then another consumer eats the consumer that ate a

producer. When producers or consumers make waste

or die, the decomposers break everything down. This helps the flow of energy

start over again. It keeps energy flowing through the ecosystem.

3	A race car body is much lighter than the body on a regular car. This means it can speed up and slow down quickly. Slowing down is important for race cars to do before they turn or when they come in for a pit stop.
2	A race car has a super-strong engine made of many small parts. A race car's engine is much stronger than an engine in a regular car. Another important part of a race car is the body.
1	There are a lot of parts in a race car that help it reach top speed. What are some of those parts?
5	Race cars aren't just faster than normal cars; they are more special, too. Even the steering wheel is special. Drivers need to learn and practice for many years.
4	Special brakes help race cars to slow down. All of the special parts in a race car are important. But the most important thing is the race car driver.
