Unit 1. Artificial Limbs

1.	Artificial limbs are fake arms and legs.
⇒	
2.	They are made by humans or machines.
\Rightarrow	
3.	They replace missing limbs.
\Rightarrow	
4.	Over the years, the design of artificial limbs has improved a lot.
\Rightarrow	
5.	In the past, artificial limbs were heavy and ugly.
\Rightarrow	
6.	They were difficult to use.
\Rightarrow	
7.	Hands were metal hooks.
\Rightarrow	
8.	Legs were made of wood.
\Rightarrow	
9.	They were mainly used to hide the fact that a limb was missing.
\Rightarrow	
10.	Today, artificial limbs are more like natural limbs.
\Rightarrow	
11.	They are light and have moving parts.
\Rightarrow	

12.	Some electronic hands respond to movements in the muscles.
\Rightarrow	
13.	The fingers can open and close.
\Rightarrow	
14.	Artificial legs with rotating knees can bend and extend.
\Rightarrow	
15.	They allow users to climb stairs and ride bikes.
\Rightarrow	
16.	In the future, artificial limbs could be controlled by thoughts.
\Rightarrow	
17.	Scientists are making chips to put in the brain.
\Rightarrow	
18.	The chips will download data straight to the brain.
\Rightarrow	
19.	Users will not have to be wired to a computer.
\Rightarrow	
20.	They could also feel objects through their artificial limbs.
\Rightarrow	
21.	Someday, artificial limbs may do more than natural limbs!
\Rightarrow	

Class		Name (
-------	--	--------	--

Unit 2. Seeing Red

1.	We all have favorite colors.
\Rightarrow	
2.	But if you are an athlete, you should like red.
\Rightarrow	
3.	In a recent study, British researchers found the color red helped people in sports.
\Rightarrow	
4.	Athletes who wear it are more likely to win.
\Rightarrow	
5.	The researchers studied the effects of color at the Summer Olympics.
\Rightarrow	
6.	Red or blue uniforms were given randomly to the athletes.
\Rightarrow	
7.	The researchers wanted to know if the uniform color changed the outcome of the
	matches.
\Rightarrow	
8.	The results showed that sometimes it did not matter what color an athlete was
	wearing.
\Rightarrow	

9.	When one athlete was much better, he or she always won.
\Rightarrow	
10.	Color had no influence.
\Rightarrow	
11.	But when opponents had similar skills, color did matter.
\Rightarrow	
12.	Athletes who wore red won more matches.
\Rightarrow	
13.	The color of their uniform seemed to give them an advantage.
\Rightarrow	
14.	Think about it.
\Rightarrow	
15.	What color is the uniform of your favorite sports team?
\Rightarrow	
16.	Many teams wear red.
\Rightarrow	
17.	The next time your team is deciding on uniforms, vote for red.
\Rightarrow	
18.	It just might help your team win.
\Rightarrow	

Class		Name	
-------	--	------	--

Unit 3. What's That Noise?

1.	Your home is silent when everyone is sleeping, right?
⇒	
2.	But perhaps you can hear a little noise from the fridge or cars from a nearby road.
⇒	
3.	You may not realize it, but this noise is a form of pollution!
\Rightarrow	
4.	If you ask about environmental problems, most people think about air or water
	pollution.
\Rightarrow	
5.	People do not realize that one of the most common forms of pollution is noise
	pollution.
\Rightarrow	
6.	This is human or machine-made sound that has a bad effect on human wellbeing.
\Rightarrow	
7.	Most noise pollution comes from traffic.
\Rightarrow	
8.	However, planes, machines for construction, or even loud TVs add to the buzz.
\Rightarrow	

9.	We should care about noise pollution because it affects our health.
\Rightarrow	
10.	It can cause hearing problems and stress.
\Rightarrow	
11.	Over time, stress can cause serious problems in our bodies.
\Rightarrow	
12.	So what can we do?
\Rightarrow	
13.	Our first step should be to reduce the noise we make.
\Rightarrow	
14.	For example, lower the volume on your TV.
\Rightarrow	
15.	By reducing our own noise, we can improve our own health and the health of
	others.
\Rightarrow	

Class		Name	
-------	--	------	--

Unit 4. Understanding the Heart

1.	The heart is important because all the other organs depend on it.
\Rightarrow	
2.	
۷.	Inside the heart, there are four areas called "chambers."
\Rightarrow	
3.	The heartbeat fills the chambers with blood, then empties them by pumping the
	blood through your body.
\Rightarrow	
4.	This is called "the circulatory system."
\Rightarrow	
5.	Blood is carried through the body by tubes called "blood vessels."
\Rightarrow	
6.	Vessels that carry blood away from the heart are "arteries," and they look red or
	pink.
\Rightarrow	
7.	Vessels that carry blood back to the heart are "veins," and they look blue because
	the oxygen that was in the blood is gone.
\Rightarrow	
8.	We have lots of little blood vessels in our bodies.
⇒	
~	

9.	If your blood vessels were connected end to end, they would wrap around the
	earth twice!
\Rightarrow	
10.	But the heart is surprisingly small.
\Rightarrow	
11.	The adult heart is about the size of a fist.
\Rightarrow	
12.	It works amazingly hard, beating about 70 times per minute or 4,200 times per
	hour!
\Rightarrow	
13.	It pumps 7,500 liters of blood daily, enough to fill a swimming pool!
\Rightarrow	
14.	So keep that amazing organ healthy!
\Rightarrow	

Class	Name (
-------	--------	--

Unit 5. Hypertext Literature

1.	Hypertext literature is a fun, new way to enjoy stories and books.
\Rightarrow	
2.	Thanks to electronic devices, readers can interact with links in a story.
\Rightarrow	
3.	They don't have to read from start to finish.
\Rightarrow	
4.	They make choices.
\Rightarrow	
5.	Some readers think it is more fun than print literature.
\Rightarrow	
6.	You can think of hypertext as building blocks.
\Rightarrow	
7.	It can be put together in different ways.
\Rightarrow	
8.	This literature can be made in different formats.
\Rightarrow	
9.	One type has a central storyline.
\Rightarrow	
10.	Links allow the story to go different ways.
\Rightarrow	
11.	Readers eventually return to the main storyline.
\Rightarrow	

12.	Another format has links that can change big parts of the story.
\Rightarrow	
13.	There is more than one ending.
\Rightarrow	
14.	Hypertext literature can also be a mix of formats.
\Rightarrow	
15.	Pottermore is J. K. Rowling's hypertext novel.
\Rightarrow	
16.	It is part of the Harry Potter series.
\Rightarrow	
17.	Readers can link to information about the characters.
\Rightarrow	
18.	The links help readers understand more about the other Harry Potter books.
\Rightarrow	
19.	Hypertext can be an exciting way to experience literature.
\Rightarrow	

Class		Name	
-------	--	------	--

Unit 6. Types of Literature

1.	There are many ways to write.
⇒ 2.	
≥ :	These genres can look different and make the readers feel different things.
3.	Poetry is one genre.
⇒ 4.	It uses emotions.
→	it does ciriotions.
5 .	Poems are created when words are formed into lines and stanzas.
⇒ 6.	A stanza is a group of lines.
\Rightarrow	
7.	Lines sometimes rhyme at the end.
⇒ 8.	This means that they have the same sound:
\Rightarrow	
9.	Summer day
⇒ 10.	Let's go play.
\Rightarrow	
11.	A novel is a book.
⇒ 12.	Novels are fiction—not true.
1 ∠. ⇒	NOVEIS ALE HULIUH—HUL LIUE.

13.	They usually contain characters.
\Rightarrow	
14.	They also have a plot, or sequence of events.
\Rightarrow	
15.	The setting is the place where the story happens.
\Rightarrow	
16.	An article is another genre.
\Rightarrow	
17.	It gives information.
\Rightarrow	
18.	It is often found in a newspaper or a magazine.
\Rightarrow	
19.	It contains facts about a topic.
\Rightarrow	
20.	The genre of drama—often in the form of plays—is performed.
\Rightarrow	
21.	It can look like poetry, but dramas have stage directions and lines for characters
	to speak.
\Rightarrow	
22.	The stage directions tell the actors what to do.
\Rightarrow	J. 1 1111 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
23.	If you take the time to read different genres of literature, you will find many
	interesting stories about almost everything in our lives!
\Rightarrow	

Class	Name	
-------	------	--

Unit 7. Poems We Love

1.	
'-	Some poems are easy to love.
\Rightarrow	
2.	Poems by Shel Silverstein are good examples.
⇒	
2	Consider the short near "Forly Dird"
3.	Consider the short poem, "Early Bird."
\Rightarrow	
4.	You will appreciate how it makes you smile.
\Rightarrow	
5.	People often say, "The early bird catches the worm."
\Rightarrow	
6.	This means that it is good to be early for things because you'll get the best
	choices before others get there.
\Rightarrow	
7.	At the beginning of "Early Bird", the poem asks us to reflect on being a bird.
\Rightarrow	The are beginning of Larry Bird , and poor in denied to remote on being a bird.
8.	No one usually considers what happens to the worm.
\Rightarrow	
9.	But at the end of the poem, the poet makes us think about it.

10.	We might imagine living under the ground, pushing to the surface of the earth in
	the morning.
\Rightarrow	
11.	Thentrouble.
\Rightarrow	
12.	A bird picks us up for breakfast!
\Rightarrow	
13.	But another worm might sleep late and remain under the soil.
\Rightarrow	
14.	That worm is safe and happy.
\Rightarrow	
15.	It's no one's breakfast.
\Rightarrow	
16.	Most people only think about being the bird when they say, "The early bird
	catches the worm," but this poem makes us consider a different idea.
\Rightarrow	
17.	Waking early is best for birds, but sleeping late is recommended for worms!
\Rightarrow	

Class	Name	
-------	------	--

Unit 8. Anne of Green Gables

1.	Anne of Green Gables was written by L.M. Montgomery in Canada.
⇒	
2.	It was published in 1908.
⇒	
3.	It is a story about a special orphan girl who changes the lives of people around
	her.
\Rightarrow	
4.	The story begins with an elderly man, Matthew, and his sister, Marilla.
\Rightarrow	
5.	They live together on their farm, Green Gables.
\Rightarrow	
6.	They want to adopt a boy to help them on the farm.
\Rightarrow	
7.	They are disappointed when a girl arrives instead.
\Rightarrow	
8.	They decide to send Anne back.
\Rightarrow	
9.	However, Anne is too interesting to resist.
\Rightarrow	
10.	She has bright red hair and freckles.
\Rightarrow	

11.	She loves to talk.
\Rightarrow	
12.	Although Anne has a quick temper, she also has a positive attitude.
\Rightarrow	
13.	She can find the good in any situation.
\Rightarrow	
14.	According to Anne, " you can nearly always enjoy things if you make up your
	mind firmly that you will."
\Rightarrow	
15.	After just one day with Anne, Matthew and Marilla decide to keep her.
\Rightarrow	
16.	That decision changes all three of their lives for the better.
\Rightarrow	
17.	They are filled with a love that they had never known before.
\Rightarrow	

Class	Name	
-------	------	--

Unit 9. Digital Money

1.	Years ago, people carried cash, checks, or a credit card.
\Rightarrow	
2.	They would pay with one of those methods.
\Rightarrow	
3.	Today, most people carry less cash than before.
\Rightarrow	
4.	They rarely use checks.
\Rightarrow	
5.	This is because digital money has become popular.
\Rightarrow	
6.	Bitcoin is one type of digital money.
\Rightarrow	
7.	It was developed in 2009.
\Rightarrow	
8.	Its goal was to take influence away from banks and the government.
\Rightarrow	
9.	People make and control it.
\Rightarrow	
10.	There are different ways to get bitcoins.
\Rightarrow	
11.	First, you can buy them.
\Rightarrow	

12.	Users download a Bitcoin wallet.
\Rightarrow	
13.	Then they can buy any amount.
\Rightarrow	
14.	Bitcoins' worth changes with the market.
\Rightarrow	
15.	Another way is called mining.
\Rightarrow	
16.	This way, you can get bitcoins for free, but the process is not easy.
\Rightarrow	
17.	A person must find an answer to a very difficult math problem.
\Rightarrow	
18.	It can take five years using a normal computer.
\Rightarrow	
19.	Now, some businesses accept digital currency.
\Rightarrow	
20.	The number will become larger, but people are worried about security.
\Rightarrow	
21.	They want to be sure that their bitcoins are very safe.
\Rightarrow	
22.	When digital wallets are completely secure, digital currency may become as
	popular as cash.
\Rightarrow	

Class		Name (

People used cows, plants, shells, salt, and spices to pay for things. ⇒ 11. About 2,700 years ago, metal coins were introduced as money. 	6.	However, it only worked if both people needed what the other had.
 ⇒ 8. A commodity is something that is needed by most people. ⇒ 9. That gives it value. ⇒ 10. People used cows, plants, shells, salt, and spices to pay for things. ⇒ 11. About 2,700 years ago, metal coins were introduced as money. 	\Rightarrow	
 8. A commodity is something that is needed by most people. 9. That gives it value. ⇒ 10. People used cows, plants, shells, salt, and spices to pay for things. ⇒ 11. About 2,700 years ago, metal coins were introduced as money. 	7.	Next, people began using commodities as money.
 ⇒ 9. That gives it value. ⇒ 10. People used cows, plants, shells, salt, and spices to pay for things. ⇒ 11. About 2,700 years ago, metal coins were introduced as money. 	\Rightarrow	
 9. That gives it value. ⇒ 10. People used cows, plants, shells, salt, and spices to pay for things. ⇒ 11. About 2,700 years ago, metal coins were introduced as money. 	8.	A commodity is something that is needed by most people.
 ⇒ 10. People used cows, plants, shells, salt, and spices to pay for things. ⇒ 11. About 2,700 years ago, metal coins were introduced as money. 	\Rightarrow	
 10. People used cows, plants, shells, salt, and spices to pay for things. ⇒ 11. About 2,700 years ago, metal coins were introduced as money. 	9.	That gives it value.
⇒ 11. About 2,700 years ago, metal coins were introduced as money.	\Rightarrow	
11. About 2,700 years ago, metal coins were introduced as money.	10.	People used cows, plants, shells, salt, and spices to pay for things.
	\Rightarrow	
\Rightarrow	11.	About 2,700 years ago, metal coins were introduced as money.
•	\Rightarrow	

12.	The value of each coin was stamped on it.
\Rightarrow	
13.	Coins made paying for things easier.
\Rightarrow	
14.	Around 800 A.D., paper money was made in China.
\Rightarrow	
15.	Paper is lighter than coins.
\Rightarrow	
16.	Paper money usually represents something valuable, like silver or gold.
\Rightarrow	
17.	Today, people still use paper money and coins.
\Rightarrow	
18.	They also use credit cards.
\Rightarrow	
19.	Digital money, like bitcoins, is used around the world, too.
\Rightarrow	
20.	How will money change in the next 100 years?
\Rightarrow	

Class	Name (
-------	--------	--

Unit 11. Shopping at the Stock Mark

1.	When most people think of going to the market, they think of buying food.
\Rightarrow	
2.	If you wanted to buy part of a company, you'd go to a market as well, but this
	market isn't a store you can go to.
⇒	
3.	You'd buy from a stock market.
\Rightarrow	
4.	Businesses will often sell parts of their companies.
\Rightarrow	
5.	They do this to get more money.
\Rightarrow	
6.	The parts of the company they sell are called shares.
\Rightarrow	
7.	The people they sell to are called investors, and the money they get is called
	capital.
\Rightarrow	
8.	Businesses can use the capital they get to expand their business.
\Rightarrow	
9.	They can also start new projects.
\Rightarrow	

10.	They have to make the value of their company grow.
\Rightarrow	
11.	The investors expect to make a "return on their investment."
\Rightarrow	
12.	That means that they expect to get more money back from their shares than they
	paid for them.
\Rightarrow	
13.	Investing in the stock market can be a good way to make money.
\Rightarrow	
14.	However, you have to be careful.
\Rightarrow	
15.	If you invest in a business that does poorly or goes out of business, your money
	will be lost.
\Rightarrow	

Class	Name (
-------	--------	--

Unit 12. What are Credit Cards?

1.	Do you know that small plastic cards can be used to buy goods on credit?
⇒	
2.	This means that people can spend the credit company's money and pay it back
	later.
⇒	
3.	People who have jobs or have wealth can get credit cards.
\Rightarrow	
4.	You also have to be an adult and have an address in the country.
\Rightarrow	
5.	Many people have at least one credit card.
\Rightarrow	
6.	You can use a credit card instead of cash.
\Rightarrow	
7.	To pay at a business, people put their card in a machine.
\Rightarrow	
8.	When the card is used, the company pays for the goods.
⇒ 	
9.	The money it paid is due at the end of the month.
\Rightarrow	

10.	Credit card users may pay the whole credit card bill when it is due.
\Rightarrow	
11.	Other users may just make a small payment.
\Rightarrow	
12.	They can pay the rest over time, but they will have to pay interest.
\Rightarrow	
13.	It can be a problem if credit cards are lost or stolen.
\Rightarrow	
14.	Someone else might use the card to buy things.
\Rightarrow	
15.	Credit card companies work hard to stop this type of abuse.
\Rightarrow	
16.	They remind users to be careful with their cards.
\Rightarrow	

Class		Name	
-------	--	------	--

Unit 13. A Face Like No Other

1.	Look at a picture of your friends.
⇒	
2.	How do you tell your friends apart?
⇒	
3.	Of course, you look at their facial features.
\Rightarrow	
4.	You see the spacing of their eyes.
\Rightarrow	
5.	You look at the shapes of their noses.
\Rightarrow	
6.	You notice the shapes of their faces.
\Rightarrow	
7.	Computers can recognize faces the same way.
\Rightarrow	
8.	A computer can analyze a picture of a person.
\Rightarrow	
9.	The computer records the geometry of the face.
\Rightarrow	
10.	Geometry is the type of mathematics that studies shapes and sizes.
\Rightarrow	
11.	Facial geometry exactly measures the distance between the eyes.
\Rightarrow	

12.	It can then be compared to the size of the eyes.
\Rightarrow	
13.	The computer compares the width of the mouth to the width of the nose.
\Rightarrow	
14.	Many measurements are taken.
\Rightarrow	
15.	The measurements together make a person's unique profile.
\Rightarrow	
16.	Facial recognition programs can now identify people in a crowd.
\Rightarrow	
17.	They can be used to check that a person is who they say they are.
\Rightarrow	
18.	Companies have just begun using this technology to help us unlock our phones
	and buy things.
\Rightarrow	

Class		Name	
-------	--	------	--

Unit 14. Frank's Lunch

1.	Frank's ready for lunch.
\Rightarrow	
2.	He visits the lunch counter with three dollars in his pocket.
\Rightarrow	
3.	He buys a salad for \$0.75.
\Rightarrow	
4.	"That will be a healthy start to my lunch," says Frank.
\Rightarrow	
5.	"It costs 3/4 of a dollar."
\Rightarrow	
6.	An apple costs \$0.25.
\Rightarrow	
7.	"That's 1/4 of a dollar," says Frank.
\Rightarrow	
8.	"3/4 + 1/4 = 4/4 or 1. \$1.00."
\Rightarrow	
9.	He buys a bottle of water for \$0.60.
\Rightarrow	
10.	"I'll need something to drink. That's 6/10 of a dollar," says Frank.
\Rightarrow	
11.	Carrots are \$0.10 each.
\Rightarrow	

12.	"I like carrots. I'll have four of them," Frank decides.
\Rightarrow	
13.	"That's \$0.40 or 4/10 of a dollar. 6/10 + 4/10 = 10/10 or 1. \$1.00.
\Rightarrow	
14.	With everything together, I've spent \$2.00 so far."
\Rightarrow	
15.	Frank sees sandwiches for \$0.99 each.
\Rightarrow	
16.	"A sandwich would be perfect to go with my lunch.
\Rightarrow	
17.	\$0.99 is 99/100 of a dollar, or just less than \$1."
\Rightarrow	
18.	There isn't anything that costs \$0.01.
\Rightarrow	
19.	Frank spends \$2.99 on his lunch.
\Rightarrow	
20.	That means he had a really good meal, and he still has \$0.01 left in his pocket.
\Rightarrow	

Class		Name (
-------	--	--------	--

Unit 15. The Mistake on Mars

1.	Different cultures have different languages.
⇒	
2.	They also have different ways to measure things.
⇒	
3.	Today, there are only two forms of measurement widely used.
\Rightarrow	
4.	Most of the world uses the metric system of measurement.
\Rightarrow	
5.	This system uses units such as meters and grams.
\Rightarrow	
6.	Three countries continue to mainly use imperial measurements like miles and
	pounds.
\Rightarrow	
7.	These countries are Myanmar, Liberia, and the USA.
\Rightarrow	
8.	This caused trouble for the American space agency NASA.
\Rightarrow	
9.	In 1998, NASA sent a spaceship to Mars on a mission.
\Rightarrow	
10.	They wanted to measure the climate.
\Rightarrow	
	·

1	
11.	The ship cost \$327.6 million.
\Rightarrow	
12.	It would take almost a year to travel from Earth to Mars.
\Rightarrow	
13.	Everything had to be perfect.
\Rightarrow	
14.	Unfortunately, something wasn't perfect.
\Rightarrow	
15.	NASA uses metric measurements.
\Rightarrow	
16.	This makes it easier to work with other countries.
\Rightarrow	
17.	But one of the American companies NASA worked with did not.
\Rightarrow	But one of the American companies with an with aid not.
18.	The program that told the ship how high to move around Mars was written in
	imperial units.
\Rightarrow	
19.	This meant the ship moved too low in space.
\Rightarrow	
20.	The ship crashed on September 23, 1999, and the mission was lost.
\Rightarrow	
21.	From 2007, NASA decided to use metric measurements only.
\Rightarrow	

Class		Name (
-------	--	--------	--

Unit 16. Measuring Animals in the Wild

1.	How can scientists measure big animals like whales?
\Rightarrow	
2.	A whale in the ocean can't be measured easily.
⇒	
3.	Scientists need to find a creative way to collect this information.
\Rightarrow	
4.	For whales, scientists usually start by studying dead animals.
\Rightarrow	
5.	Sometimes, the bodies of dead whales wash up on beaches.
\Rightarrow	
6.	Scientists do manual measurements of these animals.
\Rightarrow	
7.	Scientists can use tools like a measuring tape or a scale to measure a dead
	animal.
\Rightarrow	
8.	After measuring many dead animals, scientists can figure out the average
	proportions of a whale.
\Rightarrow	

9.	For example, they know about how big the animals are from their noses to their
	eyes, and they know how far it is from the animal's eyes to their front flippers.
\Rightarrow	
10.	Scientists use this information to know about living animals.
\Rightarrow	
11.	They take pictures of animals they want to study.
\Rightarrow	They take pictures of animals they want to study.
12.	They might only photograph part of the animal, but they can make an estimate of
	the length and weight of the animal.
\Rightarrow	
13.	They can do this with math.
\Rightarrow	
_
